Outcomes measurement

Outcomes measurement

Excellence in collecting outcomes and delivering value

With the move towards integrated health care systems there is a greater focus on delivering value through improving outcomes and lowering costs. However, measuring value, organizing around it, and delivering it is challenging for many health systems. Your transformation to value must be grounded in the automated measurement of outcomes. Our solution enables you to quantify your outcomes data and identify areas of best practice for continuous

improvement. As a health system this can help you define clear goals and drive team alignment.

QuestLink is designed to digitally capture and view outcomes across entire care pathways. These outcomes help evaluate the effectiveness of care provided, help individualize that care to meet the needs and expectations of each patient and provide actionable data to providers.

Advantages of QuestLink

- Library with hundreds of validated survey instruments.
- Automation of Patient Reported Outcomes (PROs) data collection.
- Analytics on patient and population level.
- Standards based integration with EMRs, data warehouses and (external) clinical registries.
- PROs, Clinician Reported Outcomes, Clinical Data and Patient Experience Measures in one unified system.
- Secure integration with external registries.
- Enhanced shared decision making.

Validated survey instruments

QuestLink solutions support hundreds of validated survey instruments. For some pathways NHS England has already made commitments to increase the use of these instruments e.g. early intervention in psychosis. Surveys can easily and automatically be administered based upon diagnostic or procedural codes, or as part of a pre-defined care path. This helps to ensure that providers and healthcare systems minimize the administrative burden related to outcomes measurement. Outcomes data helps to deliver valuable insight when identifying quality improvement opportunities for healthcare systems.

ICHOM standard sets

The QuestLink solution was one of the first to be certified by the International Consortium for Health Outcomes Measurement (ICHOM), a non-profit organisation with the mission to transform healthcare systems worldwide by measuring and reporting patient outcomes in a standardized manner. ICHOM organizes global teams of clinical key opinion leaders, outcomes researchers and patient advocates to define Standard Sets of outcomes per medical condition, and then drives adoption to enable healthcare providers globally to compare, learn and improve. The QuestLink solution supports all standard sets published by ICHOM to date, and is continuously updated with new sets as they become available.

Value added by QuestLink

- Helps patients become more involved in the care process.
- Minimize the administrative burden related to implement outcomes measurement.
- Create actionable information at the patient and population level.
- Flexible tools to address diverse outcomes collection needs such as ROMs, PROs, patient satisfaction and clinical outcomes.
- Large library of pre-built, validated survey instruments across diverse care specialties.

Solutions for actionable population health management

Philips VitalHealth offers a suite of market leading cloud-based software solutions for population health management: care coordination, Outcome measurement, patient engagement and health care analytics. All software solutions are based on best practices - with a focus on ease of use - and can be implemented either standalone or integrated. In addition, all Philips VitalHealth solutions share the same underlying platform, which allows integration and data sharing amongst various health care functions. This enables value based health networks to provide personalized care collaboration across the care continuum.
